Overview

About Howard

Howard Frankfort, Ph.D., is a technology specialist in the New York office of Fish & Richardson P.C. Dr. Frankfort has experience in a wide range of molecular and cellular biological techniques and applications. Dr. Frankfort has prepared and prosecuted patent applications in the biotechnology, pharmaceutical, and chemical arts since 1985. He has obtained numerous patents for large, academic, and startup biotechnology clients, including patents for hybridomas and monoclonal antibodies, adjuvants and methods to modify the immune and autoimmune response, genes, therapeutic proteins, anti-viral treatment agents and diagnostic assays, including HIV agents and assays, recombinant viruses and vectors, novel cell lines, wound healing, anti-bacterial and antitumor agents, growth factors and methods of treatment using such agents.
