Overview

About Matt

Matthew Mattson is a principal in the Dallas office of Fish & Richardson P.C. Matthew's intellectual property law practice began after a fifteen-year career in software development, test, and quality assurance. He worked as an individual contributor, team member, and manager in industries ranging from large defense contractors to small Internet startups. Matthew has served as a liaison between software developers, testers, and management in creating, implementing, and testing both stand-alone and client server software systems on various hardware and software platforms. His experience also includes graphical user interface design, software development, internet and network technologies, website development, database testing, process development, system analysis and requirements development, and software configuration management. In one startup, Matthew was in charge of analyzing and testing multiple aspects of a global dynamic Internet caching network. While working in a previous role, Matthew was also a lead testing engineer for all aspects of a company's web site and in charge of setting up testing environments including virtual machines and test systems for multi-aspect manual and automated testing efforts using commercial and custom-designed software test automation tools.

As a patent lawyer, Matthew has drafted, prosecuted, and supervised hundreds of patents in technology areas including software, business methods, Internet and browser technologies, search technologies, knowledge base/artificial intelligence/machine learning, big-data retrieval and processing, network/internet portals, airline/travel scheduling and management, network configuration and testing, telecommunications, cloud-computing, graphical user interfaces, database technologies (conventional and in-memory), mobile-device-oriented technologies, medical devices, customer relationship management (CRM) / enterprise resource planning (ERP) systems, electro-optics, petroleum reservoir development /simulation, electro-optics/laser technologies, and sporting

equipment.

Matthew Mattson's work in the cloud area includes:

- Functionality implemented in cloud computing environments,
- Large-scale distributed system testing,
- Multi-tenant environments,
- Test system virtualization, and
- Network systems.

Focus Areas

Services
